[57] **ABSTRACT**

A graphical user interface arrangement for use in connection with a computer system, the computer system providing a plurality of accessible resources. The graphical user interface arrangement enables the computer system to display graphical images from one or more of a plurality of image sets as selected by the user, and is responsive to user resource information display input to enable the display of resource identification information from a resource list that is associated with a displayed image. In response to user resource selection input selecting a resource identified in the displayed resource identification information, the graphical user interface arrangement provides access to the associated resource.
